CAREER OBJECTIVE

AI and Data Science fresher with strong enthusiasm for building scalable AI models and analyzing complex datasets to extract meaningful insights. Passionate about applying data-driven approaches to solve real-world problems and continuously learning new technologies. Eager to contribute technical skills, creativity, and analytical thinking to a forward thinking, innovation-driven organization.

SKILLS

- **Programming:** Python, Object-Oriented Programming (OOP)
- **Databases & Querying:** SQL, MySQL
- **Data Science & Analysis:** NumPy, Pandas, SciPy, Matplotlib, Seaborn, Data Preprocessing, Feature Engineering, Exploratory Data Analysis (EDA)
- **Machine Learning:** scikit-learn, Linear Regression, Logistic Regression, Naïve Bayes, KNN, Decision Trees, Random Forests, XGBoost, Evaluation, Optimization and hyper-parameter tuning.
- **Time series analysis:** Forecasting, ARIMA, SARIMA, Prophet.
- **Deep Learning:** ANN, RNN, CNN, OpenCv
- **NLP**: Tokenizer, Stemming, Bag of Words, TFIDF
- **GenAI**: LLMs, LangChain, LangSmith, RAG, Fine Tuning, GPT, BERT, Vector Databases (FAISS, Chroma, Qdrant)
- **Agentic AI**: LangGraph, LangFlow
- **Frameworks & Tools:** Jupyter Notebook, Git, GitHub, Streamlit, Gradio, FastAPI, MS Excel
- **Deployment:** Model Serialization (Pickle/Joblib)

PROJECTS

- **Profile - Bot** | *FastAPI, Qdrant, RAG*
  - Built a **RAG**-based AI chatbot that answers interviewer queries by retrieving data from my portfolio and resume.
  - Used LangChain, **OpenAI API**, and **Qdrant** for semantic search and context-aware response generation.
  - Developed scalable APIs with **FastAPI** and deployed using Docker for portability.
- **Fraud detection system** | *PCA, XGBoost, Streamlit*
  - Developed a fraud detection system using transaction data with precomputed **PCA features**, enabling efficient handling of high-dimensional and anonymized data.
  - Performed data analysis and preprocessing, and trained an **XGBoost** model with **hyperparameter tuning** to accurately classify fraudulent vs. non-fraudulent transactions.
  - Built an interactive UI using **Streamlit** allowing users to input PCA features and get real-time fraud predictions.
- **Forecastify** | *ARIMA, SARIMA, Gradio*
  - Built a stock price forecasting system using **ARIMA** and **SARIMA** to predict future prices of stocks from yfinance.
  - Developed an interactive UI with **Gradio** to visualize trends and enable real-time user-driven predictions.

CERTIFICATES

- Generative AI – GeeksforGeeks
- TensorFlow course – GeeksforGeeks
- Introduction to Data Science – Infosys Springboard

EDUCATIONAL QUALIFICATION

- **B.Tech. in CSE(AI & ML)** (2021-2025)
  Aurora's Technological & Research Institute
- **Intermediate** (2018-2020)
  Sri Sanjeevani junior college
